SeeYou CUPX file format

CUPX format is an extension of the cup format. It is actually a combination of two ZIP files combined in a CUPX file.

It can be created by

```
copy /b pics.zip + points.zip test.cupx
```

or on linux

```
cat pics.zip points.zip > test.cupx
```

The first ZIP file (pics.zip) contains all the images in JPG format in the `pics/` folder.

The second ZIP file (points.zip) contains POINTS.CUP that cointains the waypoints with filenames of pictures corresponding to points in the `pics` column of the CUP file (without folder name).
